

Metsä

Metsä Group – a forerunner in sustainable bioeconomy

Jari Voutilainen
SVP, Corporate Affairs, Metsä Group

Metsä Group – northern wood into **sustainable** products

Finnish forest industry group
focusing on wood supply, forest
services, wood products, pulp,
fresh fibre paperboards, tissue
and greaseproof papers

Owned by **103 000** Finnish
forest owners

Sales in EUR * **5.7 billion**
Employees **9,300**

Industry designed for **circular economy**

Our main raw material is **renewable** wood from sustainably managed northern forests

Production operations are based on **circulations**

Our packaging materials and papers are made of fresh fibre. They are **strong, safe** for food contact, **recyclable** – and alternatives to plastics

- Fresh and recycled fibres have different characteristics and end-uses, and both are needed

We have **invested** EUR 2 billion in more sustainable operations and new bioproducts, and plan to invest another 2 billion

- The **bioproduct mill** concept is a new business model, which utilises 100% of side streams from pulp production and creates a unique industrial ecosystem
- Our innovation company Metsä Spring invests in development of **higher value added** bioproducts – for example, a new technology to make textile fibres from wood

Investments
in EUR

2+2 billion

6,7x

more CO₂ tied in forest growth and products than fossil emissions

zero

fossil emissions in 2030

Paper and paperboard packaging
recycling rate in Europe

82%

Each part of a tree is utilised
to the highest value

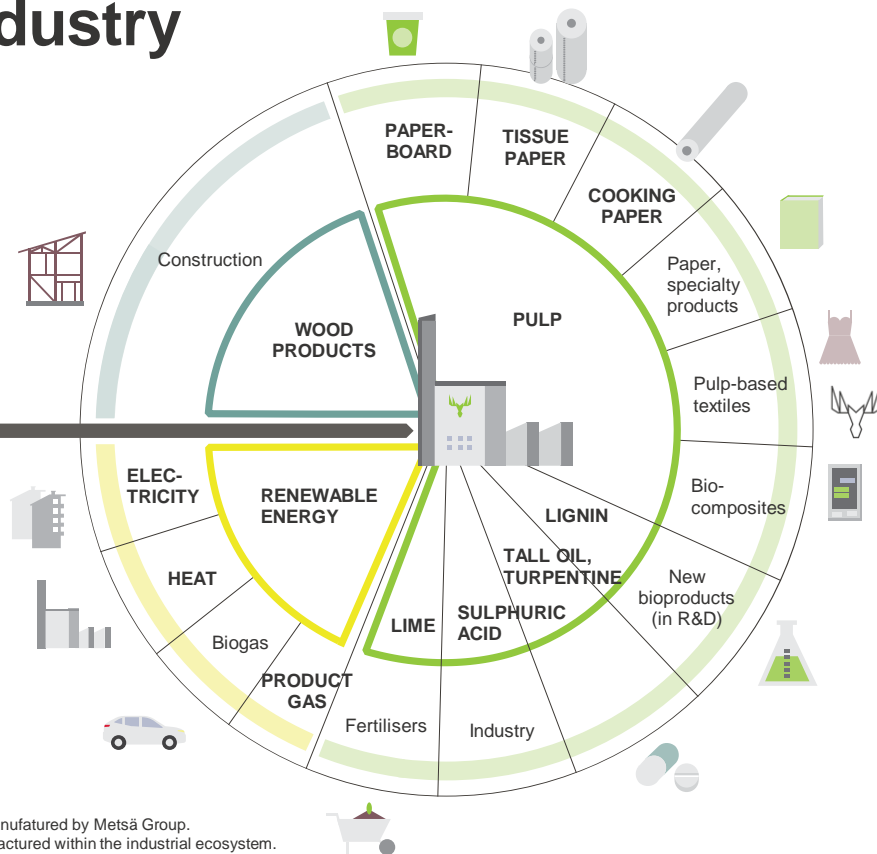

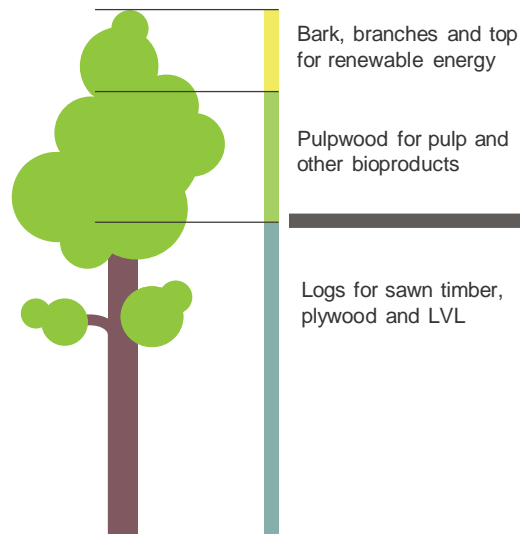

New plastic-free
eco-barrier paperboard

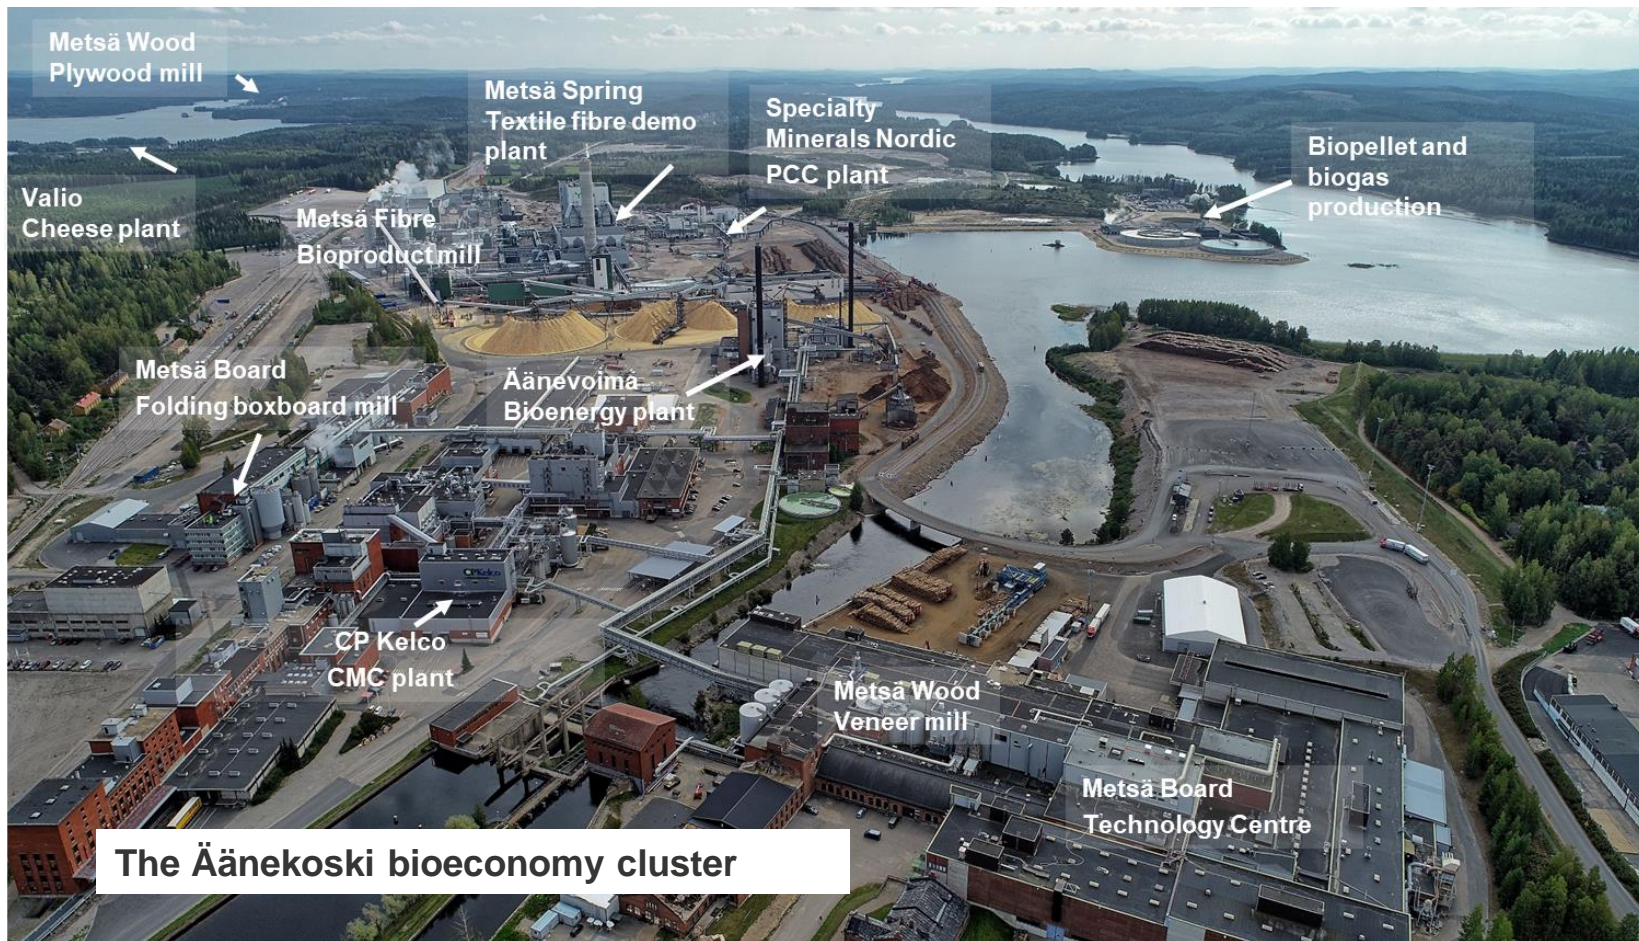

Innovative wood-based
textile fibres

Beyond traditional forest industry
